Forager Score vs. Changepoint by Age

Summary

Older adults complete **fewer trials** and earn **fewer points** compared to younger adults. Despite this, they show **faster learning**, indicated by a **lower changepoint**. Their approach to the task differs in strategy: they make **more choices per trial** and **spread their choices** across a wider range, gaining **more information per trial**, on average. This exploratory behavior is **maintained** as the task progresses, suggesting a su..
